

■ Understudy

Problem. Sabine retires in 18 months. She's the only person who knows why invoices get held, re-coded, or escalated.

Screen recordings show **what** she does. They never capture **why** — and the why is the job.

Understudy

"Understudy learns the judgment behind an expert's screen work, then teaches the next person to make the same calls."

1 • Teach

Work one normal session. It asks *why* at your pauses.

2 • Review

The answers become rules you confirm — in your own words.

3 • Train

A new hire is stopped *before* the mistake, by your words.

One link. No install. All data fictional.

Live demo

Capex question at a real pause → guardrail question → debrief with **answered / deferred / unresolved** counters → teach-back → **confirmed Work Map** → Lena's save **blocked in Sabine's words** → mastery card.

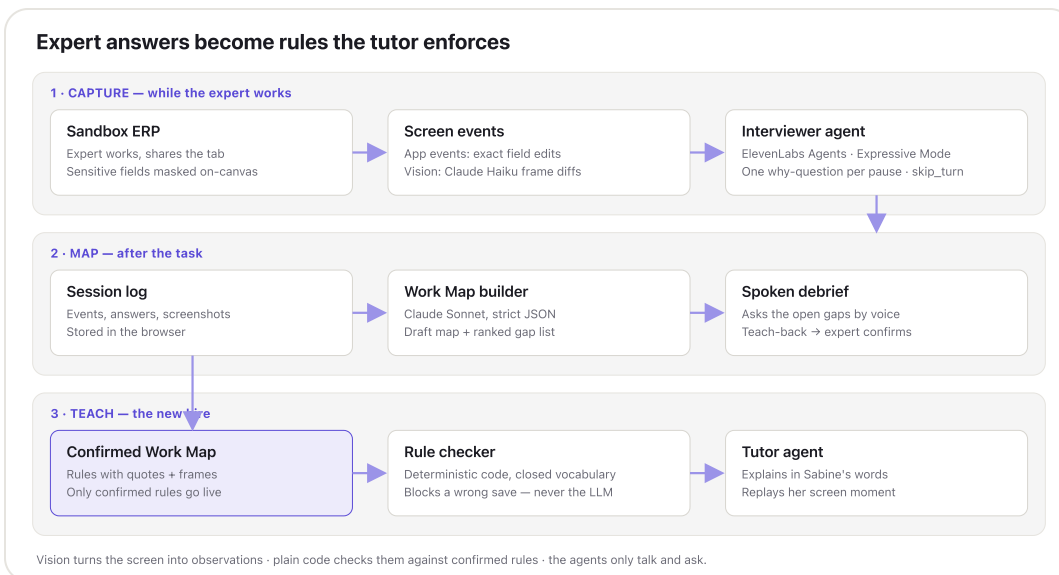

(switch to the app / video)

The Apprentice Test

When to ask	Unasked event + 2.5s no input + 1.5s silence + agent quiet + 20s cooldown. Keystrokes say "don't barge in."
What to ask	Only why / limits / exceptions / "when do you stop and ask someone". Never what's visible. Topics never repeat — enforced in code.
Understood?	Every gap ends answered / deferred to a named person / unresolved — then a confirmed teach-back. Deferrals never count as answered.
Did they learn?	Unseen €7,200 case caught before save; hints-off solo pass; mastery per rule. One case = a result, not mastery.
Trust	Off-the-record kills mic+frames+events. IBAN masked <i>before</i> frames leave the browser. Keys server-side.

How it works

Vision turns the screen into observations → **plain code** checks them against confirmed rules → the agents only talk and ask.

Signature proof. Sabine: "Actually, it's 4,000 now." → Work Map v2 supersedes v1 → a €4,500 invoice is blocked — **no code change.**

Moonshot — people first, then agents

Every confirmed Work Map is a course for new hires **and** a read-only rulebook an AI agent can load.

Agents take the routine steps and stop exactly where the expert would. Today: one task. Next: a living company memory that only asks about what changed.
